**The role of education in the implementation of the conceptual foundations of technological sovereignty of Russia**

**Abstract:** This paper identifies the relationship between the development of the national education system and the formation and implementation of the foundations of technological sovereignty of Russia. The main goal in this process is to improve social, economic, political, legal and technological structures through the industrial and scientific and technical development of the state. The assertion of technological sovereignty is based on the contribution to the educational system and research activities, while the result is an improvement in the general welfare of the nation, the development of living standards, competitiveness and independence of the country.
