About Teaching Bachelor Students in "Computer Sciences and Technologies" Study Program at Don Institute SJU-DSTU

Abstract: Based on the experience of teaching a number of information technology disciplines at Don Institute SJU-DSTU, the methodological aspects of teaching Bachelor students majoring in "Informatics and Computer Engineering" in the English language have been investigated. The examples of the developed teaching materials, control and test assignments, and approaches to creation of the course projects have been provided. The issues of integration of the full-time and distance education modules have been studied. The prospects for efficient design of the study process for the Chinese senior year students, including the requirement to pass the final qualifying work, have been determined.
