**Digital Sovereignty in the Field of Information Protection in the Example of a Critical Information Infrastructure**

**Abstract:** Since 2022, many foreign suppliers ceased working at the Russian market, which caused an urgent need for development and implementation of the localized solutions. This has especially affected the critical sectors of economy such as banking, power engineering and healthcare. The report presents the achievements of an enterprise successfully implementing the import substitution policy in the above sectors. The existing localized solutions, their pivotal capacities and successful examples of implementation at the major state and private companies have been investigated in detail.
